Computing and Information Technology graduate from RIT Dubai with a minor in Business Administration. Skilled in web development, UI/UX design, databases, and technical problem-solving. Experienced in building responsive web experiences, improving user flows, and supporting business-focused digital products.

Education

Rochester Institute of Technology, Dubai, 2021 - 2026

BSc in Computing and Information Technology
Minor in Business Administration

Skills

Programming & Web: Python, Java, PHP, Bash, HTML/CSS, MySQL, Vue.js, React Native

Cybersecurity & Firewalls: Palo Alto Networks, Security Policies, NAT, App-ID, User-ID, URL Filtering, Threat Prevention, SSL Decryption, Forcepoint DLP

Networking: TCP/IP, OSI, VLANs, ACLs, OSPF, DNS, DHCP, Subnetting, Routing, QoS, IPsec, Inter-VLAN Routing

Identity & Remote Access: Active Directory, LDAP/LDAPS, GlobalProtect, Certificate Authorities, SSL/TLS

Monitoring & Troubleshooting: Palo Alto Logs, Traffic and Session Monitoring, Wireshark

Automation & Infrastructure: Python, Flask, Netmiko, GNS3, Cisco IOS, Docker, VMware, AWS

Frontend & Product: Responsive Web Design, UI/UX Design, Wireframing, Prototyping, Figma, User-Flow Testing

Experience

Gift-It | Dubai, UAE

Frontend Developer & Product Associate, May 2024 - Present

- Developed and maintained responsive web pages across desktop and mobile devices.
- Fully developed the KSA Arabic web version, supporting Arabic content, responsiveness, and regional user experience.
- Built prototypes and proof-of-concept features to test product ideas before full implementation.
- Created mobile app user cases, tested user flows, identified bugs, and documented issues.
- Managed transactional HTML/CSS emails, including order confirmations and e-invites, while maintaining brand consistency.
- Improved platform usability by analyzing customer feedback, user behavior, and pain points.
- Researched UX improvements and keyword strategies to support engagement and retention.
- Worked directly with the founder on product direction, marketing initiatives, and platform growth.

StarLink, an Infinigate Group Company | Dubai, UAE

Cybersecurity Intern, Jul 2026 - Sep 2026

- Configured and tested Palo Alto Networks firewalls through virtual labs covering interfaces, security zones, security policies, NAT, routing, DHCP, and DNS.
- Applied threat-prevention profiles, URL filtering, App-ID, User-ID, SSL decryption, and policy-based traffic controls.
- Integrated Palo Alto firewalls with Windows Server Active Directory using LDAP and LDAPS authentication.
- Monitored traffic, sessions, and logs while troubleshooting DNS, routing, authentication, certificate, and connectivity issues.
- Studied Forcepoint DLP workflows covering data classification, enforcement policies, endpoint protection, incident monitoring, migration, and upgrades.

Projects

Immersive Brain Exploration, VR Platform for Psychology Education

Senior Development Project, RIT Dubai | Sep 2025 - May 2026

- Developed an interactive VR neuroanatomy learning platform using Unity, C#, OpenXR, and XR Interaction Toolkit.
- Built VR interactions for brain structure selection, highlighting, isolation, rotation, opacity control, and hemisphere separation.
- Designed world-space UI panels showing structure names, functions, and clinical notes.
- Supported Meta Quest deployment with performance, comfort, readability, and accessibility considerations.
- Contributed to system architecture, user workflows, testing plans, and project documentation.

Secure Small Mall Automation System, AI-Assisted Network Automation System

Network Design & Performance Project, RIT Dubai | Mar 2026 - Jul 2026

- Built an AI-assisted network automation system for a secure smart mall network.
- Used Python, Flask, GNS3, Netmiko, Cisco IOS, VLANs, ACLs, OSPF, and Docker hosts.
- Developed a conversational "Network Brain" to convert plain English requests into network configuration actions.
- Implemented dynamic tenant onboarding and offboarding with automatic VLAN, subnet, gateway, ACL, and OSPF updates.
- Supported validation testing using ping, iperf3, QoS checks, and ACL policy testing.
- Added closed-loop correction to detect network failures, diagnose issues, apply fixes, and revalidate results.
